OpenText™ AppEnhancer

Quickly and easily manage content from capture to use in lead applications

Boost productivity by connecting content to core applications
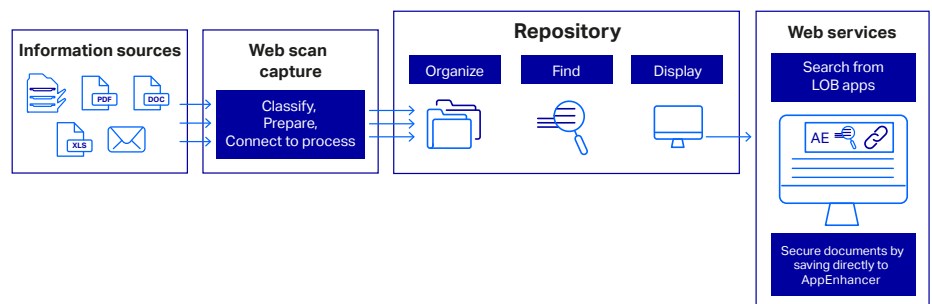

Reduce errors and speed workflows by capturing content from any source

Simplify contract and purchase approvals to increase agility

OpenText™ AppEnhancer supports organizations' content management by combining a document repository with a full workflow engine and a forms manager. This allows organizations to approve everything from purchases to contracts without additional systems.

AppEnhancer is a low-touch system requiring minimal IT overhead. For users who live in financial, human resources or electronic medical records (EMR) systems, it serves as a never-seen, back-end service that simplifies their workday. REST services allow for full two-way connection between the system of interaction and the content service.

AppEnhancer provides smaller organizations with a single solution for content management, business process management and forms automation. The user interface shows users only what they need to see and allows them to quickly get back to in-progress tasks. They can also kick off approval or notify users that tasks are ready from a single interface.

Information sources | **Web scan capture** Classify, Prepare, Connect to process | **Repository** Organize · Find · Display | **Web services** Search from LOB apps · AE · Secure documents by saving directly to AppEnhancer

opentext™

OpenText™ AppEnhancer includes:

- All clients, server and license management server elements to create and manage an AppEnhancer repository

- Web-based administrative UI

- Web-based client UI for accessing data

Capture documents from any source

Whether it is an image from a file folder, a newly scanned invoice or a document directly from a Microsoft® Office product, AppEnhancer ensures that all content brought into the organization is connected to the right business process. Integrated web scanning provides full OCR and metadata extraction from any scanner, as well as the ability to manage PDFs and other related electronic document types through a single capture portal. For customers standardized on Microsoft 365®, AppEnhancer has a connector for Office Online Server (OOS) to directly edit and save Office documents.

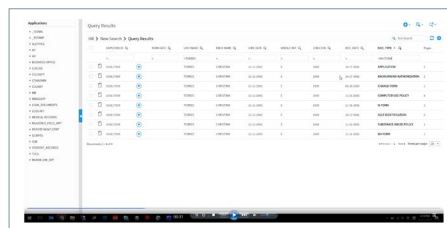

Work seamlessly with Microsoft 365 without opening a new browser

Organizations with large volumes of print or PDF-based reports can organize and digitize in a single step with Output Transformation Services. This add-on module provides print stream transformation from a variety of sources (folders, FTP, email, MQ, HTTP, web services). This content is then indexed and processed to match with AppEnhancer naming and metadata.

View all processes and upload documents to suit workflows

Refine search-based metadata to sift through related documents

Type-ahead search allows searching even the most complicated phrases

About OpenText

OpenText, The Information Company, enables organizations to gain insight through market leading information management solutions, on-premises or in the cloud. For more information about OpenText (NASDAQ: OTEX, TSX: OTEX) visit: **opentext.com**.
